

## TIMBER

Kastrup offers various high quality timber.

When the timber arrives in our factory it has been scanned. All the knots, cracks and resin exudations are then cut off. Therefore, our timber has no brown spots from knots and resin exudations.

### PINE

Kastrup uses slow-growing Nordic pine with 90% heartwood. The timber consists of dense annual rings and a good resin content which protects the timber against rot and mould.

### MAHOGANY

In the mahogany series Kastrup works with the selected mahogany type Sapele Mahogany. It features a high natural oil content which contributes to longer durability. Our mahogany comes from sustainable forestry and is FSC® certified.

### KEBONY

Kebony is an environmentally friendly alternative to tropical hardwood. A chemical treatment of softwood results in the cell structure of the timber tying together. As a result, the timber characteristics are permanently improved.

Optionally, Kastrup can also offer windows and doors in other timber types such as oak and teak.

## COLOUR

Kastrup offers various colours. Below you can see the standard colours for our windows and doors. If you wish to have a special colour like metallic decor, stainless steel or any other RAL colour, feel free to contact one of our distributors.

### TIMBER

Timber is treated with AKZO NOBEL industrisystem, which gives the timber maximum durability and resistance.

### ALUMINIUM

Our aluminium surface is treated in the so-called 12-stage chromate conversion coating process which gives aluminium excellent resistance. The colours used are called Fiji colours. They are used for both matt and gloss surfaces. The advantage of Fiji colours is their high resistance against scratches and scuffs.

## MAKE YOUR DREAM COME TRUE

A new building gives you the freedom to design everything exactly the way you want it. Please be aware that your demands on windows and doors in the future can only be reached with a quality product.

Kastrup offer you windows with high-energy efficiency, security protection and suitable designs for different architectural challenges. The quality of Kastrup windows exceed market requirements concerning stability, energy saving, security and finish. We are reknown for that.

Your Kastrup windows will give you lasting satisfaction and well-being. They are an investment which will pay for itself in the long run.

### YOUR ADVANTAGES WITH KASTRUP WINDOWS

- + Various design styles
- + Well-known quality in energy saving, security and material
- + Long-term investment

## THINK LONG-TERM WHEN THINKING ABOUT RENOVATION

Replacing 15-20 year old windows enables you to reduce heat loss of up to 40%.

However, energy saving is not the only reason for renovation. New windows increase the comfort as well as the financial value of your house. Kastrup enables you to renovate with respect for existing architecture and simultaneously enjoy the advantages of new technologies.

Kastrup windows and doors can give your home an individual look and at the same time hold on to the existing soul of the building.

### YOUR ADVANTAGES WITH KASTRUP WINDOWS

- + Ambiente as the classic design style
- + Slim profiles that allow more sunlight
- + Traditional Scandinavian hardware for classic windows available
