## SPACERS

Internorm **ISO spacers** achieve the highest overall energy efficiency of the window system. Aluminium spacers are also available.

## SECURITY GLAZING

**Tempered single pane security glass** (ESG) imparts increased resistance against mechanical and thermal tension. **Laminated security glass** (VSG) offers burglary protection through active and passive security. The splinter-free glass with a tear-resistant, ductile layer in between additionally protects from injuries.

## IMPORTANT INFORMATION

**Designer glazing** cannot always be displayed in complete accordance to the originals in colour and structure.

To prevent misunderstandings, please look at glass samples at your Internorm [1st] window partner.

Due to physical reasons, condensation or misting up of the outer glass pane in the gap between the panes of **windows with integrated blinds** where the sun protection is located, can occur under certain climatic condition.
